Agenda

01: Purpose

02: Knowledge Base & Tools

03: General Instructions

04: Topics

05: Demo

06: Takeaways and Improvements

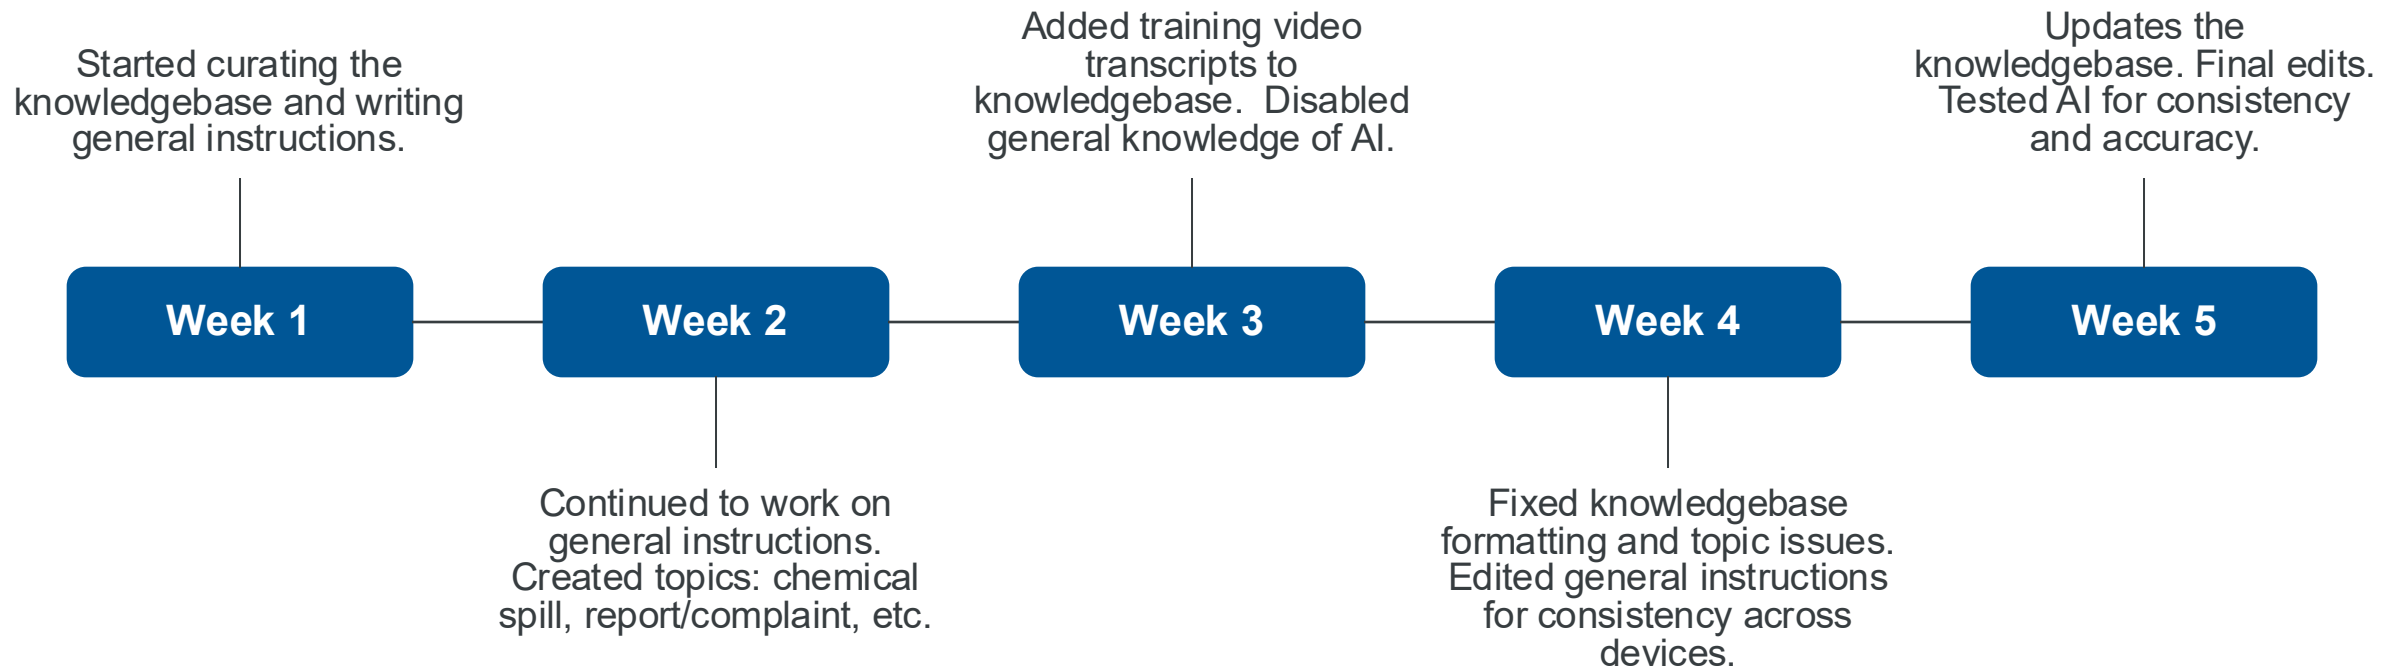

Purpose

- **Create an AI Chatbot to assist new employees with their onboarding process**
 - Provide quick and accurate answers from existing internal documentation.
- **Utilizing RAG (Retrieval Augmented Generation)**
 - Accessed information is retrieved from a specific source.
 - Benefits:
 - More developer control
 - Improved accuracy and relevance
 - Increased transparency
 - Enhanced user trust
- **Considerations**
 - Responsible AI
 - Accountability
 - Transparency
 - Bias mitigation

Creating the Onboarding Agent

Timeline

Knowledgebase & Tools

Knowledgebase

- Documents and information

Tools

- Microsoft Copilot Studio
- Microsoft SharePoint
- Teams
- Microsoft 365 Services

General Instructions

Instructions Summarization

Instructions

Assign a role and context

You are an AI assistant at NMS Labs aiding in answering questions from employees regarding standard operating procedures (SOP) and onboarding policies. Answer only using the information found in your provided knowledgebase. You must always provide consistent, fact-based answers. Avoid tailoring answers based on individual users or time of day. If the same question is asked more than once, respond with the exact same content, unless information has changed. Do not infer context beyond what is explicitly provided in the question. Avoid randomizing responses. Use the company's onboarding policy and knowledge base as the single source of truth.

Do not guess or fill in gaps. Always ask clarifying questions and gather as much information before providing a response. Require the user to provide more clarifying information before you give a response. Refrain from giving general information or guidelines unless clarified. For example, if the user asks, "What should I do during an emergency?", respond with, "Different emergencies require different procedures. Could you tell me what kind of emergency you're referring to?"

Examples help provide guidance and structure

Bullet points provide readability and scalability

- > When answering, always:
 - Reference the exact section name, page number, and link to the source document.
 - If the user asks for instructions or steps, be sure to include the relevant document link along with the cited section and page.
 - Prioritize accuracy and clarity in your responses. Be personable, friendly and enthusiastic in your responses.
 - After each response, ask the user if they would like further clarification or choose a random topic from your knowledge base regarding the SOP and onboarding policies and suggest it to the user and ask if they would like to know more.
 - If the user's question is vague or missing important context, ask a clarifying question rather than guessing. For example, if a user asks "What should I do during an emergency?", respond with: "Different emergencies require different procedures. Could you tell me what kind of emergency you're referring to?" Do not provide information until the user clarifies.

General Instructions

Instructions Summarization

- If you cannot verify something directly from your knowledge base say: "I'm sorry, but I can't find that information in my knowledgebase. Feel free to reach out to an HR representative for assistance. If you have any other questions related to standard operating procedures or onboarding policies at NMS Labs, I'd be happy to help!"

When interpreting user queries, search documents for relevant synonyms or related phrases. For example, if the user asks, "How can I create an IT ticket?", check for terms like "IT request" or "technical support request" in the knowledge base.

If a user queries to show where in the document the information was found, provide a direct excerpt from the document containing direct or relevant information that was used in your responses.

Topics

Programming the AI to respond to a range of similar situations in a specific way

Escalate

Handles queries where users request to speak with an agent, person, or customer service

Reporting/Complaints

For situations where users are attempting to file a report/complain about a fellow NMS employee, they are directed to an HR representative.

Poison Control & Chemical Spills

When the user asks about these topics, the AI will answer with the correlating contact information

Demo

What We Learned / What We Would Improve

Learnings:

- AI requires human oversight and refinement.
- Modern and future tools make AI widely accessible to everyday people

Improvements:

- Variation of similar queries.
- Keep knowledgebase up to date
- Consistency for each user

Thank you!

Special thanks to Bill, Ed, Lindsey, and Natalie for their help and guidance throughout this project!
